

Enhance Biological Discoveries From scRNA-seq Data

The LeviCell Systems Amplify Insights With 5x More Single-Cell Data From Precious Samples

Agne Antanaviciute, PhD, at the University of Oxford, value how critical it is to maximize the utility of precious resources such as intestinal biopsy samples. Agne and team utilize the LeviCell® systems in their workflow to improve sample quality, resulting in significantly higher-quality single-cell data. This allows Agne's team to extract the most value from every precious sample processed in their lab, resulting in unparalleled data yield for deeper insights into disease biology.

MAXIMIZE SAMPLE UTILIZATION

Extract valuable insights from complex tissues

DISCOVER TRUE BIOLOGY

Retain all cell subtypes in the dataset, even the most fragile ones

ACCELERATE DISCOVERIES

Analyze more cells to accelerate your research timeline
