

COMING SOON!

LEVIPREP™ PRODUCTS

New methods for tissue dissociation.

LeviPrep products provide the first step of an integrated workflow for challenging primary tissue work. Enrichment of primary cells from tissue with LeviPrep products will:

- Be easy and effective
- Preserve cell health and maximize cell recovery
- Be streamlined through pre-optimized protocols
- Allow quick ramp up of experiments

Combined with the power of Levitation Technology and the LeviCell™ System, enrichment of highly viable cells with minimal perturbations and free of debris, dead or dying cells can be easily accessible for downstream studies.

To learn more, visit levitasbio.com/leviprep.

LEVISELECT™ PRODUCTS

Now you can target cells of interest.

LeviSelect products combine Levitation Technology with targeted selection of specific cell types. With LeviSelect, you can simultaneously:

- Identify and enrich viable, specific cells of interest
- Remove unwanted contaminants

Levitation Technology delivers the most gentle, label-free cell enrichment, preserving the integrity of target cells without bias. Leveraging cells' natural density and magnetic properties, LeviSelect products enable levitation of targeted cells to different heights, allowing for target cell selection.

END-TO-END LEVITATION-BASED WORKFLOW

Harness the power of Levitation Technology with an end-to-end sample processing workflow.

Most cell-based biological studies require target samples to be processed for downstream endpoint analysis or controlled sample expansion. However, starting materials can be highly variable, resulting in sample processing workflows that are disconnected, time consuming, and potentially damaging to the cells. This conundrum creates a critical bottleneck that prevents researchers from getting the most out of their workflows, and their cells.

The LeviCell workflow addresses this critical bottleneck by providing solutions for all stages of sample processing - from sample access, enrichment, selection, to characterization.

Powered by Levitation Technology, the LeviCell system was initially developed to address the critical need for sample enrichment. With the addition of LeviPrep and LeviSelect product lines, the ever-expanding portfolio of levitation-based solutions empower end-to-end next generation sample processing and characterization protocols.
